

Your NCE FM construction permit is about to expire! Your CP is not a license, it is only the permit to build and test your new station. If the CP expires you will be left with nothing.

Even if you have not begun to build your station all may not be lost. In many cases, if enough time is left on your CP, you may be able to redesign your facility to a "Bare Minimum Configuration," get on the air, and get your license.

The RFEngineers 'Save-a-CP' program is designed to provide you with a practically turn-key bare minimum configuration. It will get you on the air so you can get your license.

We will provide:

- Engineering guidance to identify a 'feasible' site.
- Engineering portion of an application to move to the new site.
- All of the equipment necessary to get you on the air.
- Installation and setup of the station equipment.
- Engineering portion of an application for your license.

You will provide:

- A place to hang your antenna (We can help you find such a place).
- The installation of your antenna and feedline (We can supervise but not climb).
- A location for the equipment cabinet.
- Electrical power. 220VAC power is best but 110VAC power will work.
- If your equipment site is not at your "studio" site you must provide Internet service at both locations.

The equipment we install is yours to keep. All equipment is new with original manufacturer's warranty.

Complete package, installed and ready to go on the air, all for one low price.

Call now to find out if your CP can be saved. Initial consultation is free so you have nothing to lose and a radio station to gain.

Call RFEngineers, Inc. at 352-367-1725 now!
